You have been spending
a lot of time at your
house.

You have been hearing
about people getting
sick.

Some people have gotten very sick. They may have the virus.

If you feel sick, what do you do?

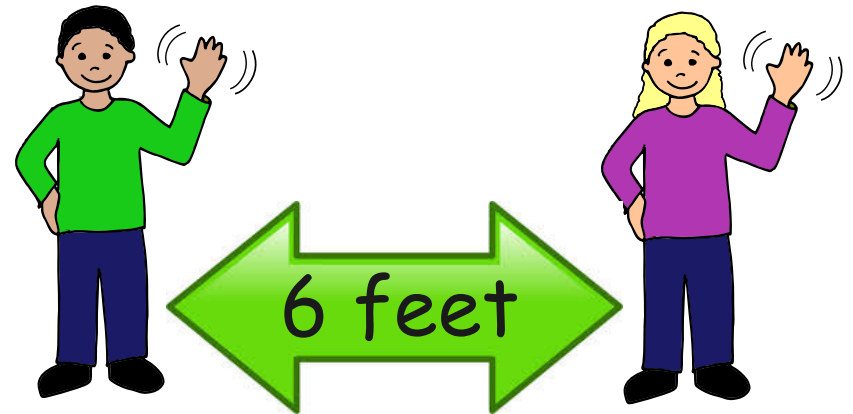

Doctors and nurses are working hard to help these people and others.

Scientists and experts are working hard to help us with this problem.

How do we keep
ourselves safe from
this?

You can stay 6 feet
away from people.

Wash your hands using soap and water, for at least 20 seconds.

Try not to touch your face.

Be careful what you touch when you are out and about.

Cough into your elbow.

Sneeze into your elbow.

Since this started you
may be feeling a lot of
different emotions.
That is okay!

You may be confused.

You may want to cry.

You may feel
frustrated.

You may feel happy.

You may feel mad.

You may feel uncomfortable.

Whatever you are
feeling, it is okay!

Talk to someone about
how you are feeling and
how you can stay safe
and healthy!
